Driver configuration for Acad 2002-08

Configuring Driver

Start Acad Go to File, Plotter Manager, double click on Add-A-Plotter Wizard, choose **My Computer**, from **Manufacturers** list choose **Hewlett-Packard**, pick **HP DesignJet 750C C3196A** model , click next; you will see a warning message-click Continue and Next again. Ports screen appears – pick **Plot to File** option, click Next type in new plotter name or leave at default, click **Edit Plotter Configuration: Device and Document Settings – Graphics – Vector Graphics – Color Depth – Monochrome-16777216 shades of grey**; Go to **Custom Paper Sizes** (optional) - set your default Paper Size (eg.36x48) click **Save as** – save your plotter configuration to .pc3 file, click OK and Finish. Driver is configured and ready to use with Acad 2002.

Pen Assignments

Attached to this info there is a pen configuration file (Plot Style file) **MidtownPlp.ctb**. Copy this file to ACAD Plot Styles folder (File-PlotSyle Manager). The file will appear in Plot Style Table (pen assignments) drop down menu (**Plot Dialog Box**). You can use it as a template along with the installed driver to create your plot files.

You have to set pens before creating plot file!

To set pens - pick the supplied file from Plot Style Table (pen assignments) drop down menu, click Edit, set your lines thickness and screens; you can save your pen assignment to a different file or overwrite existing file and then reuse it as needed. **Optionally use your existing ctb file, just remember to set color property (on the right) to black for all Pot Styles (on the left).**
